

populations varies considerably between specimens from the same locality over a period of two months (Fenner, pers. comm.).

Owing to the uncertainty of the subspecific status of available New Guinea material and the scarcity of Australian specimens, we have decided to leave the subspecific status of the Australian specimens unresolved.

Acknowledgements

We are greatly indebted to Mr T. L. Fenner for his detailed comparison of photographs with specimens in the Central Reference Insect Collection, Department of Primary Industries, Konedobu. We also wish to thank Dr I. F. B. Common and Mr John Green for preparing photographs of the specimens figured.
